# User quota information

The student account quota is 2GB in the Computer Science Department Laboratory.

When you are logged in on a lab computer (Windows, Linux and Guernika), you can see your quota information:

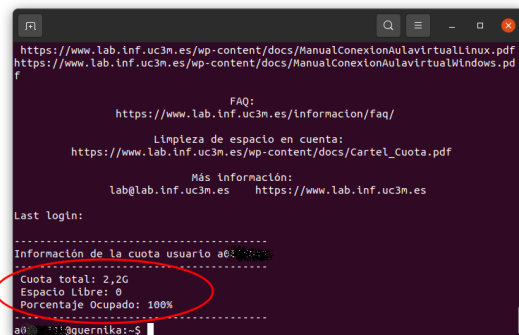

| Windows | Linux | Guernika |

If your quota is over 2GB, **you may not be able to log** in and it will be necessary accessing **Guernika server to free up space** in your account.

The **cleaning process** is detailed below:

1. Log in to **Guernika Server** (You can find more infomation about it in this guide)
2. You will be able to check at the moment of the connection if you have enough **space available** . The system allows you to write up to **2.2GB**.
3. If you need to delete files, you can type the command "**du -h --max-depth=1**" and view your directories and their sizes. In the last line you can check total storage of your account.

4. Frecuently there are a lot of unnecesary information stored in "**./.cache**" directory. You can remove this directory typing the command "**rm -fr ./.cache**".
5. There are some important directories such as "./**Documentos**", "./**Windows", "./snap".** **C**arefully check their stored data and then **remove what you consider unnecessary**. For this operation you can type the the command "**rm -fr directory"** (Take care with this command, what you delete is unrecoverable)
6. IMPORTANT! We recommend you to do not delete these directories.
   "./Maildir ./windows/escritorio ./windows/documentos ./windows"
7. You can recheck the available space in your account with the command "**consultar_cuota.sh**"
8. When you have finished, you can close your session by typing "**exit**"
